### Alvaro Siza Complexo Turístico da Boavista

Oporto, Portugal

Photographs: Duccio Malagamba

The ensemble of dwellings that comprise the Boavista complex are set at the northern end of the allotment, alongside Avic housing estate, while the buildings to be used for shops and services are sited to the south, defining a large public square between them. This square, a key element in the composition of the unit, will be formed by two spaces situated at different levels. The lower level, open and tree-lined, is linked directly to Boavista Avisnuc, while the upper zone, which covers two underground car parks, is closed to the north and the west by the tertiary buildings. However, the two levels will be connected by pedestrian ramps and stairs.

The gentle south-north incline of the land and the interior slope facing Sossista Avenue permits the exclusive use of mezzanine basements as moded our parks.

Access to the entire complex will basically be via throughfares in the southem part in order to prevent excessive traffic on Boavista Avenue. At present there is only one constructed block of dwellings that occupies a total area of 1.400 agm. It is formed by a rectangular building measuring 104x18 metres, with nine storey and an east-west orientation. The ground floor is used for stops. A metranine basement can park utilises the slope between the two madways on which the building is set. Los conjunto de viviendas que conformarán el complejo Boavista se construirá en la zona norte del terreno, junto a la urbanización de Asiz, mientras que aquellos destinados a comercio y servicios se ubicarán al suc creando entre ellos una gran plaza pública. Esta plaza constituirá el elemento clave de la composición del conjunto, ya que estará formada por dos espacios situados a cotas diferenciadas: el inferior, constituye un espacio abiento y arbolado, y está directamente vinculado a la avenidic y el superior —que cubre dos aparcamientos en sótano—, cerrado al nonte y al oeste por los edificios de carácter terciano. Los dos niveles, sin embargo, quedarán relacionados mediante rampas y escaleras de uso peatonal.

La inclinación del terreno, suave y constante de sur a norte y del interior hacia la avenida Boavista, permite el uso de semisótanos destinados exclusivamente a estacionamiento cubierto de vehículos. Los accesos a todo el complejo se producirán, básicamente, por las calles situadas al sur liberando en lo posible a la avenida Boavista de una sobrecarga de tráfico.

En la actualidad sólo se ha construido un bloque de viviendas que ocupa un área total de 3.400 m²; tiene forma rectangular y dimensiones 104x18 metros, con una altura de nueve plantas y orientación este-oeste. La planta baja está destina a uso comercial. Aprovechando el desnivel existente entre las dos calles sobre las que se asienta el edificio, se crea un semisótano destinado a aparcamiento.

to the impression proof of therefore a MINUS bearing was softened between these that we and lightness. The comed from that playsoftened the softene help to lighten the boats and create a profile, humanic flydder.

In an improvement continue to visionity, as his consequent on office equilibries and improvementation is lightered. Less these copius que conscience la lightered and relation begans a significant la lightered in order and relation and a significant la lightered in order and relation to the consequence.

### Baumschlager & Eberle WA - Mozartstrasse

Doenbirn, Austria

Photographs: Eduard Hueber

The project is located in the carets of Dombin, of a harmor street which is named after Microst in immediate scorely. The repotential complex, diagnosity respects a hoter projected by the same architectus, situated at the same phosis, consists of their separate volumes.

Toroid of this quarter along Macontotropie is the mixture of new urban elements with remnants of the past. Along these lines the residential units are fampard to two opposing building volumes: to one side, a restored an nouveau villa, to the other, a turky terrace building. Despite the difficult point of departure, the architects achieved to fit the new building into its surroundings, in a very sensible way. It regulates between the historically different scales, the subcolar programment of four full stones and one section, pershouse mixtes to the urban force of the hoter, the organisation of two separate vounes nested to the former structure of individual houses, in these compact buildings, the apartments are situated in the fashion of a previous around the central stancesse, in order to have each apartment oriented to two diffeent sides. Some of the comers are used for verandas, allowing additional openings. The transpul overall impression is not only supported by the repostive design of the focacies, but ston by the almost black cask ned plazed bricks, which visually bridge the gap into the adjacent villa. El projecto está situado en el centro de Dobren, en una calejues que debe su nombre a Micoart. El complejo residencial se desarrolla en dos volúmenes independentes situados en disponal respecto un hote (denado por los mismo arquitectos) que se encuentra sito en la misma calibratis.

La mercia de elementos urbanos nuevos y antiguos es una caracteesca tipica de la zona de Mozantitralie. Aol, las unidades residencia
les están funqueadas por dos edificios a un lado, una villa modernista
restaurada al otro, un gran edificio. A pesar de la dificultad que ereshaba este punto de partida, los anquitectos han conseguido esegrar
el nuevo edificio en su entorno, logrando que la nueva construcción
mantenga un diálogo equilibrado y fludo con los edificios coindares;
y sus respectivas características históricas.

La disposición cubica de las cuatro plantas y el atico retranquesdo evoca la spología de un hotel, y la organización en dos volúmenes separados nos transporta a la antigua estructura de las casas. En estos edificios compactos, los apartamentos se han situado alrededor de una escalera central, disposición que permite que cada apartamento disfrute de dos orientaciones distintas. En algunas esquinas se han creado terrazas, dotando al edificio de aberturas adicionales. La senación de calma y equilibrio que transmiten estas construcciones no nace tan sólo del diseño de las fachadas, muy repetitivo, uno que también se ve favorecido por el uso de ladnillos de un rojo negruzto que nos transportan visualmente a la vecina villa modernista.

## MBM Arquitectes: Martorell/Bohigas/Mackay Kleine Circus City Block

Maastricht, The Netherlands

Photographs: Duccio Malagamba

Next to the right margin of the River Meuse and as an extension of the south part of the habonic combe of Massimirt, the extension of the Ceramique Project artise carrier is being developed on the 25 fectures occupied by the factory, its Coeren, the architect of the general project, has organised the area using the traditional forms of the city (avenues, streets, squares, parks, margine, etc.) and invited different European architects to design the buildregic Galletti Shozzi, Siza Rossi, Harthberg, Anets, Chiz and Orliz. MEM Argutedes designed the whole block called filleine Circus in the urban project, it is a U-shaped block that opens onto the wide new central avenue. of the district. The scheme seeks to achieve two specific objectives. The first observe a to achieve a better relationship with the environment. The Ushaped block opens onto the Haugemenweg (the old adjoining district). A cylindrical building is placed at the end to maintain the atmosphere of the Ushaped apace and the heights of the buildings decrease toward the Haugemanuag to connect with the scale of the old district. The second objective is to achieve a contrast between the facades giving onto the streets (solid, with regular windows) and the facades giving onto the interior (dynamic, with alternating solid and glazed strips). For further contrast the part of the south-east wing rotates in the opposite direction in order to open up lowerd the new Heugemenveg park to the south.

The two linear buildings at the perimeter are divided in the centre into two bodies in order to give continuity to the pedestrian path that runs through the district and crosses the adjoining blocks.

Each stancase and iff group has four dwellings. Each dwelling has views. onto the interior garden or the exterior park. This organisation makes full une of the lifts.

Most of the dwellings are of two types: L-shaped ones with double ventilason or compact rectangular ones with a single ventilated facade. The rooms are approximately the same in all of them living room, dring room, kitchen, two large bedrooms and services.

The garden inside the block is both a public and a community garden.

La operación de extensión del centro urbano flamada Ceramique. Project se desarrolla junto a la margini derecha del río Mosa como. externido de la parte sur del centro histórico de Maistricht en las 25. hectires que ocupata el recrito de la fábrica. El arquitecto autor del proyecto gobal lo Coenen, ha organizado el área a través de las formis tradicionales de la cuidad (avenidas calles plazas, parques, etc.), emutó a diferentes arquitectos europeos a proyectar los edificios. Galletti, Snozzi, Sizii, Rossi, Herzberger, Arets, Crisz y, Ortiz, entre otros. MEM Arquitectes ha provectado la totalidad de una manzana que en el proyecto urbano se flama Kiene Circus y estaba diseñada en forma de U aberta a la nueva y amplia avenida central del barrio. El proyecto busca dos objetivos concretos. El primero, una mejor relación con el entorno para ello abre la manzana en Ul hacia Heugemenweg (el barrio artiguo corsiguo); introduce un edificio clindrico al fondo para mantener la atmósfera del espacio en U y decrecen las alturas de los edificos hacu Heugemenweg para conectar con la escala del viejo bamo El segundo, un carácter arquitectónico de contraste entre las fachadas que dan a las calles (macizas con ventanas regulares) y las fachadas hacia el intenor (dinlimicas, con alternancia de bandas horizontaes manzas y vidnadas). Para mayor contraste aún, la parte del ala sudeste se gra del revés con objeto de aborse hacia el sur y al ruevo parque de Heugemenweg.

Los dos edificios lineales perimetrales están divididos por el centro. en dos cuerpos a fin de dar continuidad al sendero peatonal transversal que sigue a través de las manzanas contiguas en un itinerano. a lo largo del barrio.

En la organización de los edificios se han logrado agrupar cuatro waendas por cada conjunto de escalera y ascensor. Cada una de las viviendas tiene: vistas al jardin interior o al parque exterior. Esta agrupación de viviendas es una buena organización en relación a la rentabilidad de los ascensores. La mayoría de las viviendas son de dos tipos en L, con doble ventilación, o en rectangulo compacto, con una sola fachada ventilada. El programa es aproximadamente el mismo en todas ellas estancia, comedos, rocina dos dormitorios amplios y servicios.

El jardin del interior de la manzana es a la vez un jardin público y comunitario.

The U-shaped block allowed the architects to conduce elements of greenery in the subwine and to open the residential complex toward the extentir creating a visual connection between the new building and the lost neighbourhood of Heucemenners.

La forma de U de la marcara ha permitió a los arquitectos entroducir elementos di verdor en el projecto y abre el Comprisresidencial hacia el extenso conectando coulomente la hacia construcción can la contra o hacia de librariamentos.

## 36 Apartments in France Street Pietro Derossi

Turin, Italy

Photographs: Gabriele Basilico

The city appeals to the provided most of all in a situation like Treat, where the expensive compose is structure whose stratification and mounerable promovered questions are there to be seen.

The street front is broken down into how different parts, of varying heights and with offerently matted facables and facings. These are punchasted by the term surfaced fre-barrier walls which project from the line of stoping mosts. At one and the built curtain bends into a slight curve, indicating a new mad are specified in the zone master plan. It is also interrupted by a high nest divali —a modituri— which emphasses the provisional character of the present street alignment.

The bases are indicated with one portioned stretches, in a tradition favoured by Turn, and the round arched opinings in the bare forms are characteristic of some failur swerterb-century architecture. The tings points are subdenly entirened by the vertical figures of balconies one above the other joined by enquary distributed stender plans.

A breach in the curtain wall opens lowards the inner count-yeard, around which the complex is gathered in a denser configuration, enriched by two further sections. From the outside perspective view of the street, the vertical outline of which ends in the step diagonal of the roof, can be recognised. Shaped like a small tower, its brick-faced base fades towards the top into a light meet of metal railings and characterised by a sequence of narrow andsesi describing the pattern of a dematerialised virtual facade.

pueden contemplar innumerables preguntas on respuesta. La cale delantera está dividida en cuatro partes diferenciadas, de diex. tas aturas y con fachadas y munos tratados de diferentes modos fiera. estás purtuidos por muros contafuegos descubientos que se proyectadesde la linea de decive de las oubrertas. El muro de cerramiento se curva ligeramente en un extremo para mócar un nuevo eje de carreix. ra especificado en el plano maestro de la zona. Este muro también se ve interrumpido por un fragmento de pared -- una falsa ruma -- que realiza el carácter de la almesción actual de la calle. Las bases están horadadas con tramos porticados, algo muy tradcional en Turin y épico de la arquitectura italiana del siglo XX. Los puntos de conexión estin realizados por las figuras verticales de los balcones uno sobre otro, unidos por estrechos plares distribuidos de manera irregular. Un hueco en el muro cortina se abre hacia un patio intenor, alrededor del cuil el complejo se dispone en una configuración más compacta. enriquecida por otras dos secciones. Desde la perspectiva exterior se puede valumbrar el contorno vertical que termina en la pronunciada. diagonal de la cubierta. La base de ladrillo visto con forma de pequeña torre se transforma, a medida que se eleva, en una maila metálica caracterizada por una secuencia de arcos estrechos que describen el

modelo de una fachada virtual desmaterializada.

La cudad atrae al arquitecto sobre todo en una situación como esta

# Francisco Burgos, Justo Fernández-Trapa, Alberto Pieltain Edificio de 12 Viviendas

Madrid Spain

Photographs: A.L. Baltanás + E. Sánchez / A. Pieltsin

The starting point for the project is one of the Cooper pion and cut by Arturn Sens for the unbarranteer of the Linear City, a comer site of 45x40 m on which a house built by Arturn Sorie's firm in the 1920s was incarded It was notably previous to built the whose site from screen, but later the sweet decised to built a smaller building and to conserve the original house on a site of \$40 kg/s.

Contany to normal practice in the area, the architect enlargement the planning regulators by locating but dwellings at ground lever and giving them a priuse partier. This produces a stepping of the volume of the building that lighters it and that provides more light to the back parties and the original house. The difference in elevation is used to raise the private partient above. the street. Also, there are no stops between the entrance and the lift, which are on the same level.

The building regulations partnt bey windows that increase the available floor area. This was solved by containing the main facade in a parainterpret, when light place planes continue the surface of the walls. The floor-in-ceiling windows are protected by external siding blinds and a good air conditioning system.

It was attempted to improve the division into small apartments by building the dwelling floors with a steel structure, which is so sender that it is conbired in the walls and produces no protuberances on the outside. Selow, the porch and garages have a concrete structure.

The rang for the vehicle entrance is behind the pid wall of rubblework and lear morter, an original construction of the company that developed the Linear City, to which a delicate metal mesh was added.

Besites, to allow most of the gartier to be used throughout the year, the swinning poor was located at the end of the enclosure at a higher level where it receives more sum in the summer.

A flat read was chosen to take accordage of the upper fertices as part of the aft, rather than the conventional state roots used for lofts and similar premions.

E punto de partida del projecto es uno de los cláscos solares trapsdes por Arture Sons para la Urbanission de la Cudad Linea un solar de 40/40 m en esquiria. Sobre el exosta una casa cometuda por la compañía de Arturo Sonia en la segunda década del siglo XX La grame projecto contemplaba la edificación de nueva planta que ocupere todo el solar pero más tarde se decidio comienvar la casa primibia y construir un edificio más pequeña, reservando para la primera un solar de 340 m²

La ordenarca vigente se ha interpretado, contranamente a lo usual en la gona, situando dos viviendas a ras de suelo y decandolas de un ande de use particular Esto produce un escalonamiento del volumen del edico que la hace más ligero y que proporciona más luz al jardin. traiero y al viejo chale original. El destrivel del terreno se aproveda para que los jardines privados queden elevados sobre la calle Al mismo tiempo, se ha conseguido que la entrada no presente escalores. entre la calle y el ascensor ya que un pavimento llano conduce harta este último. La inevitable construcción de minadores que la ordenarsa permite y que amplia el número de metros quadrados disponibles se ha resueto de forma que la fachada principal esté contenida en un paralelepipedo donde los miradores son planos de cristal que controlan la superficie de las paredes. Por eso mismo éstas no son la habitual y pesada fábrica de ladrillo sino paños tensos de color claro. Los huecos de cristal hasta el suelo producen un agradable espacio estenos: Este atristalamento se combina con persianas correderas extenores y con una climatización confortable.

La división en pequeños apartamentos se ha procurado mejorar con la construcción de las plantas de vivienda con estructura de acerdi. tan esbeita que queda encerrada en las paredes y no produce protuberancias interiores. Por debajo de ella, en el porche y los garajes, la estructura es de bormigón.

La rampa de bajada de los vehículos queda detrás de la antigua tapia, una construcción original de la compañía urbanizadora de la Ouded Lineal, de piedra en rama y montero pobre, que simplemente se ha supiementado con una tenue valla de malizza. Asimismo, la meviable pisona se ha situado de forma que permita el uso de la major. parte del jardin durante todo el año, utuandola al fondo del recinto y a ura cota elevada, en el lugar donde da más el sol de verand.

Se ha optado por una cubierta plana, para aprovechar las terrazas superiores como parte de los aticos, renunciando a la pesada estetica. habitual de los grandes tejados de pizarra para buhardillas y similares

**Apartment Buildings I** A fail roof was chosen to take advantage of the upper terraces as port of the loffs, instead of the conventional sentratic of large state made for aprovedur las terrados superiores como parte de los abcos renunciando a la pesada erotica hostaal de los grandes tripales de powra para butardilas y umlares. ## **Maccreanor Lavington**

Ypenburg
The Hague, The Netherlands

Photographs: Anne Bousema

The location of this project was a former airport that is being transformed over the next 10 years into an extension of the hispan, thereby proveding 7,000 new cheelings. The quartered buildings occurred in the first phase of the plan as a part of the development of 1,100 cheelings. An important social for the client was to prevate a next of social groups with different daily mysters. The programme for the internal arrangement was send in the number and social of social to the provided. The massometic biologic plans transfy-tipe cheelings worth with its own individual entorsics and a private parties of stored level and apartments, suitable for other elderly, soung single people or couples, on the agreer level. The upper apartments, internally planned with three almost equal size names and a larger storage area, allow through a degree of spatial individual mission, for different possibilities in use. Complete spatial amengements are definentely busided with the interces of the dwelling having simple rooms with larger sendows and a traditional internal layout.

The bouses do not describe or dictate a way of living by introducing new bookspee, but allow through their straightforward arrangements a less awheet, less controlled use. The project is developed through the section which enhances the distinction between the public and private resiln. It presents tall bookses to the streets and public green space and shorter locades to the many intensit memor. The content of building within a plan surrounded by many super architects, each trying to make their project more extraordinary than the next, provious as a response a restrained extensive and potentially dosest facade. The building's when positioning on the edge of the major green space is considered as important as the image of the building as a december object. The monolithic appearance and simple form evokes a sense of timelessness.

Em projecto se mozerna emplizado en un artiguo apropuerto que ar vala transformur en los próximos 10 años en una extensión de La Havis proporporando 7000 nuevas sivendas. Los bloques de apartamentos se desarrollaron en la primera fase de esté projecto de 1 sobwiends. Un requisite importante para el ciferte era conseguir una mentis de grupos sociales con ritmos dianos diletentes. El programa: de distribución interna lue estricto tanto en el número como en las dimensiones de las estanoias El tipo dúpies proporciona a cada familia. and whence can and entrade individual parts cade and your jurdings. sado a niver de calle. Los apartamentos, concebidos tanto para ancianos como para perte joven o parejas, se ubican en las plantas superio. res. Estas apartamentos que muestran una distribución interna de tres ecuncus cas guales y una especiosa zona de almacenamiento. permiten un grado de indeferminación espacial para diferentes posibilidades de uso Se ha evitado una disposición espacial compleja al contar con estancial simples con larges ventanales y una distribución inter-Na tradicional

Las sivendas no describen o dictan una forma de vida al introduçir nuevas tipologias pero permiteri, por su disposición, un uso menos, definido y menos controlado. El projecto se decarrolla a través de una sección que aumenta la oficrencia entre las zonas pública y privada. Presenta elevados paramentos hacia la calle y el espacio público verde, y paramentos menos elevados hacia la zona interior más intima. El contexto de la edificación en un plano rodeado por muchos arquitectos enturastas, cada cual interitando hacer de su proyecto el más extraordinano, provocó como respuesta la construcción de un extenior sobrio y una fachada cernada. Se considero tan importante la posición urbana del edifico al borde de un amplio espacio verde, como la imagen del edifico como objeto percepcible. Su apaniencia mónolibica y su forma simple evician una sensación de etermidad.

# Francisco José Mangado Viviendas V.P.O. en Cizur Mayor

Pamplona, Spain

Photographs: César San Millán

The scheme develops two accordand housing units in the Cizur estate near Pampions. This estate has not been developed uniformly; the first speriment bloke built in the spierches show a certain amount of improviador, whereas the later developments are more restrained and other betfor services and quality of life.

The two units, one privately tenned and one publicly curred, were given the same arthfectural treatment. The reality of their location in the urban conand sharing brundered identity and even morphology, seemed to suggest that they about be healed as a single unit with regard to the general development and the common spaces. They both have a symmetrical design that seeks continuity in the two public spaces and a unitary reading of the whole within an environment characterized by diversity. The permeter defined by the buildings is interrupted in order to create visual openings and spatial continuities between the two units and between these and the earlier buildings. The surge interior spaces contain common play areas, green areas and the accesses to the dwellings and to the garages located below the building. The presence of these spaces creates a sequence between the public space and the private space that substantially improves the spatial and functional quality of the divellings.

The proposal consists of linear buildings with a double bay Each unit complants two issued linear buildings and one L-shaped building that are placed as that they define the accesses to the interior of the central space or the view of it from some specially significant point of the estate. The living nouns and elichers face the misnor spaces and the bedrooms face the streets, in the centre of the facilities are concentrated in a service bay.

El proyecto desarrolla dos unidades de vivendas de protección oficia en la urbanicación de Cour cerca de Pampiona. El conjunto de este proyecto se ha residado de manera poco uniforme, y aol a los premeros bio ques de viviendes construidos durante los años secencia ejecutados con una cierta improvisación, les ha singuido un desarrollo más contendo con alto rivel dotacional y de calidad de vida.

Las dos unidades, una de titulandad privada y la otra de trulandad pública han sido objeto de un mismo tratamiento arquitectórico La realidad de su ubicación en el contexto urbano, compartiendo limites identidad e incluso morfología, parecla sugerir la necesidad de que la propuesta de ordenación de los edificios y la configuración de los espacios comunes debian ser tratadas como una sola unidad Ambia. adoptan un esquema simétrico que busca la continuidad de los dos espacos públicos, así como una fectura unitaria del conjunto derbro de un enformo caracterizado por la diversidad El perimetro defisida por las construcciones se ve interrumpido con el objeto de crear aberturas visuales y continuidades espaciales entre las dos unidades y entre éstas y las edificaciones previamente existentes Los espacos interiores, de generosas dimensiones, contienen áreas de juego comones zonas verdes, au como también los accesos a las viviendas y a los parajes situados en el subsuelo. La presencia de estos espacios creauna secuencia entre el espacio público y el privado que contribuye a mejorar de manera sustancial la calidad espacial y funcional de las www.

La propuesta consiste en edificios lineales de doble crujía Cada undad completa dos edificios lineales aislados y uno en forma de Lique se colocan de manera que delimitan los accesos al interior del espaco central o la visión del mismo desde algún punto especialmente. significativo de la orbanización. Las zonas de estar y la cocina se onentan hacullos espacios interiores y las habitaciones hacia las cales de la urbanización. En el centro queda una cruja de servicios que permiteconcentrar todas las instalaciones.

### Helmut Richter Wohnanlage Brunner Straße

Vienna, Austria

Sourcer Strause is a main traffic artery leading out of Venna's southernmost dietric into a surrounding urban sprawl with busy industrial locations and manurably proad residential areas. The growth of private traffic here is far in excess of that of the only itself. The expansion phase, which started in sterms at the beginning of the nineties, has long come to an end. The surroundings of this building suggest a development that has encountered diffculties. Defenences in the age of the built substance, in the use of sites and the density of development dominate the situation. On the one hand, Acceptation still offers, here and there, a lively residential situation. On the other hand, the industrial area. Liesting, which can be reached in a few mindes on four and is therefore part of the residents's consciousness, revisals bell as an nadequate technomic occupation of the tentory. For this exposed and, therefore, coexpensive site, the client, a communal body, sought by means of direct commissioning a housing design which, of course, had to meet certain requirements in order to obtain the state housing subsidy. The architect later expressed his doubts about the sense of the building on this also, but he responded to the ambivisient circumstances with an extreme formulation of the deck access type. He satisfied the resisensi need for protection with a problation system placed as a buffer between the apartments and the street, while also treating themstically their exposure in urban space. The periphery as a non-place is radicalised. to contradictions are made visible and, as result, it becomes inhabitable, it is the conflict, conducted in an open and unorthodox manner between calm. and movement, which permits the development of an identifiable place in the diffuse mix on the edge of the city.

Richar's basic principles of high quality housing and living, characterised by "dustry and simplicity of organisation" that he earlier demonstrated in the project for the Graf & Self grounds become concrete in the Brunner Strasse design. Consciously belanced spatial qualities and reference aim at "eaving it so to the individual to choose communication or isolation" for, in the architect's opinion these are "the most important ortions with regard to living and humane existence." Housing and urban development are closely linked to each other. Housing is the end zone of a hierarchical sequence of spaces, it connects the most public element, the city, and the most private, the space to withdraw to in the dwelling. It can expend the social dimensions of being or restrict them. According to the architect, housing is an allegory of the position of the individual in the family and society which can be expressed in architecture.

La Brunner Stratate es la principal arteria de trafico que parte del digterto más mendional de Vieria y recorne los úncios suburbanos y el
extramado donde se encuentran poligoros industriales y sus áreas
residenciales económicas. Bi crecimiento del trafico privado en esta
zona supera con mucho al de la propia cuciad. La fase de expansión,
que en Vieria comenzata a principios de los noventa, hace siempo que
socio a su fin. Los ainededores de este edificio sugeren que ha habido
discutades de desarrollo dominari la sousición las diferencias de edad
de los proyectos construidos, de uso de los terrenos y de deradad de
desarrollo Por una parte. Atzgeradorí aún ofrece, aqui y allí, una istractiva zona residencial. Por otra, el área industrial. Liesing, a la que se flega
a unos pocos minutos a pie, por lo que forma parte de la identidad de
los residentes, se presenta como una ocupación tecnocrática e inadecuada del territorio.

Para este terreno expuesto y por ello, barato, el ciente, una entidad mancomunada, busco encargar un doeño de viviencias que cumpliera determinados requistos para cotener la subvención estabal. Postenomente, el arquitecto dudó de la oportunidad de construir en este terreno, pero no obstante respondió a las cincunstancias ambivalentes con una formulación extrema del formato de acceso por cubertas. Satelato la necesidad de protección de los residentes con un sistema de cinculación colocado como amortiguamiento entre los apartamientos y la cale, y dio un tratamiento ternitico a aquella situación tan expuesta al espacio urbano La penfena como no-lugar se nadicaliza haciendose visibles sus contradiciones y como resultado, se hace inhabitable. Se trata de un conflicto, enfocado de manera abienta y heterodoxia, entre la calma y el movimiento, lo que permite el desarrollo de un lugar identificiable en la mezcia difusa del extrarrado de la cuidad.

Se concretan en el diseño de la Brunner Strasse los principios básicos de vivienda y vida de arta calidad esa "claridad y sericiliez de organización" que el mismo arquitecto demostró en su momento con el proyecto de los terrenos Gráf & Suñ. Las cualidades y referencias de espacio conscientemente equilibradas pretenden "dejar que el individuo
elija entre comunicación y aslamiento", puesto que, en opinión del
arquitecto, son éstos "los criterios más importantes de una vivienda y
existencia dignas". La vivienda y el desarrollo urbano están estrechamente ligados. La vivienda es la terminación de una secuencia jerárquica que conecta el elemento más público, la ciudad, y el más privado, el
espacio en que uno se retira a la intimidad del hogar. Puede expandir
las dimensiones sociales del ser o restringirias. Según el arquitecto, la
wivenda es una alegoría de la posición del individuo en la familia y la
sociedad, alegoría que se puede expresar en la arquitectura.

The expansification of the areas around the former standors of the Read Clob Deportion Expansion in the Samil detect of Beroslona released a large area of development tand or a provinged area of the city. The area was a was trace-make port with great visual impact located between avenida del General Miles calle del Dr. Ferning and calle de Can Rabia.

The buildings were located at the perimeter of the plot, like the buildings of the Ensanche, but this dosed solution did not seem to be the most appropriate for a destict of soluted blocks and a pot located in the centre of a series of meet that it was wished to maintain. Therefore, the construction was concentrated in two towers and a block of the same height located at the perimeter of the site with a landacaped area in the centre.

The sac bases have a square ground plan with two conventional dwellings per floor, while the slook combans apartments for the elderly with common services on the ground floor Idning room, cleaning, informary). Under the dreamlevel, the programme was completed by a series of shops, stones, pening, etc. accessed through a square covered by a large pengola that floats between the slook of apartments and one of the towers, emphasising the public nature of the space and marking the main content of the site. Above this dense public area, sheltered from the underground bustle of the strooping centre, south-facing private gardens are protected from the traffic noise of the roads surrounding the plot.

The high density allowed by the painting regulators is contradicted by the material expression of the facades, which are light and insubstantial and decompose the built mass. The same approach is applied to the three buildings, and their north facade is dosed by a stone facing cut by clear horizontal openings. The rest of the facades have a double skin red stucce divided by window openings from foor to deling in the interior part, while on the outside. (If on from the cover wall, panels of wooden slats move at random according to the changing activity of the tenanto during the course of the day. At the level of the first foods of the buildings, a large steel pergola covered with translucion glass protects the access square to multicines located slightly below street level. This structure is supported at three points, and is slightly becaused from the facades to give it an inoutobinitial and weightless accessions that believe to says.

La urbanización de los alrededores del viejo estado del Real Cuo Deportivo Español en el barrio de Serna de Barcelona liberó una gran superficie del tarreno edificiable en una zona privilegada de la oudad. El proyecto se sóciable entre la avenida de General Mere y las cales del Dr. Fleming y Can. Rúbia, en una parcela trapezodal de goa enparto visual en el barrio.

El area edificación de la parcela se concentrata en su perimetro, de forma parecida al tipo de edificación de la zona del ensanche, pero esta solución no parecia la más adecuada a un barrio de bioques asados y en una parcela otuada en el centro de toda una sene de visuales que querámos muntener Así pues, se concentró la edificación en dos torres y un bioque a la misma altuna, situados en el perimetro del solar dejando un espacio ajandinado en su parte central.

Las dos tomes, de planta cuadrada albergan dos viviendas por returos de tipo convencional, mientras que el bloque contiene distritos apartamentos para personas mayores con servicios comunes en la planta biga (comedos impieza, enfermenta etc.). Bigo el nivel de la cale, el programa se completa con una serie de espacios comerciales, almace nes, aparcamientos, etc., a los que se tiene acceso a través de una plaza cubienta por una gran pergola que flota entre el bloque de apartamentos y una de las tomes, enfaticando el carácter público del espacio y mantando la principal esquina del solar Sobre este delso programa público, ajeno al bullico subtentineo de la actividad contercial se desplegan unos jardines privados orientados al sur y protegidos del nuido de las vias de circulación que rodean la parcela.

La elevada densidad que las ordenanzas permitilas se contrapore en la expresión material de las fachadas. De marcado carácter ligimo y livimo que desdibuja la masa de lo edificado. El mismo planteamento constructivo se aplica a los tres edificios, cerrando su fachada norte con un aplacado de piedra contado por unas abenturas marcada mente horizontales. El resto de las fachadas se componen de una doble pel un estudo rojo dividido por unas abenturas verticales de suelo a techo en su parte interior, mientras que por fuera separados 60 cm de la anterior unos paneles de lamas de madera se mueven abiationamente dependiendo de la actividad cambiante de sus riquisnos a lo largo de todo el día.

A la altura de las primeras plantas de los edificios, una gran pérgola de acero cubierta de vidrio transiciodo se encuentra dispuesta ligeramenta bajo el nivel de la calle. Esta estructura se apoya por tres puntos, separándose ligeramente de las fachadas para dar un aspecto de ligiteca e ingravidez que sorprende por sus dimensiones.

# Allford Hall Monaghan Morris Dalston Lane Housing Project, Peabody Trust

and some parking spaces.

This residential building is located in Dalson Lane, in north-east Condon, The beef of the Postbody Trust was to build low-price famility eart. The block touses to be-decream fate and 5 one-bedroom fats. In the treatment of the heads the architects product enturing the surrounding buildings, the facility was adormed with a charge-most pollum of light blue and groy squares, creating a supresquited of canodrapid architecture. The chaptered pattern extends to the south faculte, where puries of transparent and translucent pass alemais and mitigate the effect of a uniform placed surface. The apartments are divided into groups of 4 and are communicated by wide startures. The rooms are located on the north side, and the dining rooms are the south side. The first floor facts have views of the stores and those of the top floors look over the confusion to considerable height. The access to the apartments is on the south side, because Dareton Lane. is completely flanked by shops. Galles at the ends of the block open the way to a columnade that rurs along the whole building. The neighbours have a semi-private countered from which they have access to the stores.

Trunks to an integrative use of materials and an extraordinary quality of details, the architects have designed an elegant and innovative boilding that fully meets the challenge of the limbed budget.

The sensity of Bristian was limited. The solid structure of the building was cast in brisk, and the other elements were unified with galvanised steel. The callings. The baccones and the staircases give the building a robust but deli-COS ADDRESSION

Este edilico residencial se ubica en Dalton Lane, en el novesta da Londres El projecto, encargado por Fisicody Trust, contempada la construcción de pisas de aquiller de precio económica. El bloque alos 15 vivendas de alguler de dos habitaciones y 5 de una sola habitacon. Para el tratamiento de la fachado los arquitectos han rehado la remetización con les edificaciones de la zona la fachada se ha adoma. do con un metrio apprezado de cuatros lovies y graes distos creas. do un electo sorprendente, de arquitectura camuñata. El patrón de tablero de aedita se esdende hasta la fachada sur donde paneles de vetro transpirente y traslicedo se atoman, y mógan el efecto de una superficie total y unformemente acristulada.

tos gurtamentos están organizados en grupos de 4 y están comuncudos por anches escaleras. Las habitaciones se ubican en la partie. norte, mentras que en la parte sur se concentran los comedores. Les viviendes de les primeres plantes tienen visitas à les tiendes y les de las últimas plantas pueden contemplar desde una altura conside-

El accesió a los apartamentos se resica por el lado sur, ya que Dalston cane está totamente funguesdo por locales comerciales Versia en los extremos del bloque dan pario a una columnata que recome todo el edico. Los vecnos cuentan con un patro semprivado desde el que. tienen acceso a las bendas y algunos aparcamientos.

Los arquitectos han conseguido, gracias a un imagnativo uso de los muteriales y a una extraordinana calidad de detalles disellar un edifcio elegante e innovador que supera ampliamento el desafio que su

La vanedad de acabados se ha limitado. La solida estructura del edifdo se ha revestido de ladrillo, y los otros elementos se unifican con acero galvanizado. Las versas los balcones y las escaleras conferen al edifico un are robusto pero a la vez delicado.

The programme of the appropriate is simple. The bedrooms are concernment on the north son while the day areas are located on the south side with views over the park and the skyine of the City.

E programa de los apartumentos es senciso Los dormitorios se concentran en la pris norte mientras que las zonas de día estin stuades en la zona sur con vistas al parout y a las torres de la City

### García Márquez, Rubiño & Rubiño Viviendas Sociales en Cantillana

Sevilla, Spain

Photographs: Duccio Malagamba

Adoning a hernitage, two long blocks with a private garden between them respond to the grid plan of a site next to farmland on the west perimeter of Cantillana. Located at the footbills of the northern mountains of Seville, 35 km from the capital, this inverside town was a traditional crossing point of the Guadalquivir by means of a terry that is a regular subject of local folklore. Downwer a series of towns, including the famous Esquivel designed by Alexandro de la Sota, farm the fierble river valley.

It was difficult to ignore so many local references, but it was always the aim of this scheme to avoid the vernacular and folkions that has been used so often to adapt new buildings to the environment. The architects found it more interesting to work with regulations and customs in order to create natural situations without stylistic predetermination.

The gravel of the over bed, a carbo tree and two lemon trees from the orcharts of the valley make a direct allusion to the landscape and give character to a garden with a vantage-point with the river flowing below.

The blocks occupy the full area permitted by the planning regulations. Since this project was the first one to be carried out in the area of the Zoning Plan, they are aligned along the edges of the site and the construction systems and materials offer different expressions on each facade in order to enter into future urban dialogues.

The different types of dwelling are created through subtle differences, which are very difficult to achieve within the regulations, using a single model in three longitudinal strips, all the bedrooms are located on the outer edges of the blocks and they are separated by the humid areas from the day areas facing the garden, that provide their collective dimension.

The images of the furrows of brownish earth and the lines of matte asphalt, the ungainly end walls of naked brick at the edges of the towns, the metal plate of the agricultural buildings and the black mould on the belt gables of namshackle country properties, came together in the minds of the architects and created a new idea.

The stucco plasterers cutting joint at will, the bricklayers trimming bricks of different colours caught a fragment of reality.

Vecinos a una ermita a las afueras del pueblo, dos bloques alargados se vuelcan a un jardin privado encernado entre ambos, para organizar un solar de periferia ordenado por una reticula que linda con terrenos de labor en el perimetro oeste de Cantillana. Situada en las estribaciones de la sierra norte sevillana, a 35 km de la capital, esta población ribereña era un vado tradicional del Guadalquivir mediante una barca que puebla de leyendas el romancero popular. Aguas abajo un rosario de poblados de colonización, entre otros el famoso Esquivel proyectado por Alejandro de la Sota, explota la fértil vega del río.

Resultaba dificil sustraerse a tanta referencia local, pero siempre fue vocación del proyecto eludir el repertorio contextual y folclórico que ha conducido tantos intentos de adecuación a un lugar tópico vistado reiteradamente. Para los arquitectos resultaba más sugerente trabajar sobre la norma y la costumbre: cómo ésta, mediante reglas sencillas, puede derivar en aquela desembocando en situaciones naturales sin predeterminaciones estilísticas.

La grava del lecho fluvial, un algamobo serrano y dos limoneros de las huertas de la vega, agotan el catálogo de alusiones directas al paisaje y resuelven el jardin que disfruta de una privilegiada atalaya a cuyos pies discurre el nío.

Dado que este proyecto era el primero que se ejecutaba sobres los terrenos del Plan Parcial, los bloques, cuya disposición responde a la máxima ocupación permitida, se alinean a los bordes del solar e, intu-yendo situaciones posibles, adecuan mediante sistemas constructivos propios y materiales específicos las expresiones de cada fachada, todas distintas, a futuros diálogos urbanos.

Subles diferencias entre variantes, de gran dificultad en el seno de la normativa, adaptan los distintos programas familiares a un único modelo de vivienda organizada en tres bandas longitudinales: todos los donmitorios se sitúan en las franjas exteriores de los bloques y se separan con una batería de zonas húmedas de las áreas de día que, orientadas al jardin, le proporcionan su dimensión colectiva.

Las imágenes de los surcos de tierra pardusca y las líneas de asfalto mate, los desmadejados testeros de ladnillo desnudo que construyen los bordes de los pueblos, las chapas de las naves agricolas y las espadañas negras de moho en haciendas ruinosas, se agolparon en la mente de los arquitectos fijando otra mirada.

Los estucadores cortando juntas a su aire, los albañiles escafilando ladnillos de distintos colores atraparon un fragmento de realidad.

#### Bürgin Nissen Wentzlaff Housing in Muttenz Photographs: Ruedi Walti

Muttenz, Switzerland

The complex encompasses a shopping centre, a hotel, a restaurant, appartments and an extensive underground parking area. It forms a "contemporany" counterposet to the community centre at the opposite end of the town's main attest rest to the medieval fortified church. In contrast to many villages in the worstly the village centre of Multers is not concentric but linear. The project responds to the urban situation wit two high-rise buildings. the five stoney hotel with restaurant along the highway to the north and a three storey residential building along the small street to the south. The large, fat Goop shopping centre building between them is Sed into the village surroundings by these perpheral higher building volumes.

in terms of volume the project consists of a plinth with the two buildings. the hotel and the appartments) placed on it, which is clad in glass, which is enameled dark grey in the opaque areas, so that it retains an effect sim-Bar to normal glass.

in contrast to the transparent base the buildings on top of it are clad in white glass that is matt on its exterior. Open spaces or closed volumes shimmer through the external matt skin. Protection against the sun is achieved with folding aluminium shutters that can be adjusted horizontally. Here the building's skin actually opens up.

The concept is developed on two levels of flexibility: on one level the loadbearing structure of the shopping centre and the hotelinestaurant volume is based on a skeleton system. The installations are conceived in linear groups parallel to the facades. The resulting combination of flexibility in structure and disposition of the installations permitted variations in the development of the different floors during the planning phase and will allow for later physical changes over the years. In the hotel building three func-Sonally different layouts are now distributed over the five storeys: a restaurant, how rooms and appartments on the top floor.

On further level another form of flexibility was introduced, a "flexibility of anonimity", the heterogeneous multiple use of the building would scarcely have permitted subordination to a strict, uniform facade composition. In their modular use, in their distribution of windows, mail glass or folding shutters. the facades are therefore more similar to a code than to a composition. Depending on the use of the adjacent spaces the facade consists of layers of must glass, transparent glass, insulation or sun screens in various combnations. Thus the exterior layers always remains the same, the interior layare vary according to the specific functions (hotel room, apartments, the cascade starcase, bethrooms, etc.) creating the appearance of varying depths.

Este complejo engloba un centro comercial un hotel, un restaurante. un bioque de apartamentos y una extensa zona de apartamiento es al sótano. Asimismo, crea un contrapunto "contemporáneo" para el centro comunitario al otro lado de la calle principal de la oudad, cerca dela igesia medeval fortificada. A diferencia de otros pueblos de los afrededores el centro de Mutteriz no tiene un triazado concentrico sino lineal B proyecto responde a una situación urbana compuesta por dos edificos elevados el hotel de cinco plantas con restaurante y un edifico residencial de tres plantas. El gran edificio de una planta que alberga el centro comercial se ubica entre estos elevados edificios de gran volumen de la penferia.

En términos de volumen, el proyecto consiste en un plinto sobre el que se apoyan dos edificios (el hotel y el bloque de apartamentos) que está revestido de vidno esmaltado en gris oscuro en las zonas opacas, de manera que conserva el efecto similar al de una ventana

En contraposición a esta base "transparente", la parte superior está revesada de vidro blanco mate en el extenor. Tanto espacios abiertos como volúmenes cerrados brillan a través de la envoltura externa mate. El concepto se ha desarrollado en dos niveles de flexibilidad en un rivel, la estructura portante del centro comercial y la del volumen del hotelirestaurante se basan en un sistema estructural, donde las initalaciones se han concebido en grupos parafelos a las fachadas y donde la combinación resultante de flexibilidad en la estructura y en la disposcón de ristaliciones ha permitido variaciones en el desarrollo de diferentes plantas durante la fase de planificación, que sin embargo no permitrà cambios facos postenores en el edificio del hotel se han desarrollado tres distribuciones funcionalmente diferentes en las cinco. plantas de las que se compone: un restaurante, las habitaciones del hotel y los apartamentos en el piso superior.

En el otro nivel se ha introducido otro tipo de flexibilidad, una "flexibilidad de anonimito". El uso múltiple heterogéneo del edificio apenas habría permitido una subordinación a una composición de fachada. estricta y uniforme. Debido al uso modular a la distribución de ventanales, al vidno mate o a las contraventanas plegables, las fachadas seatemejan más a un código que a una composición.

Dependiendo del uso de los espacios adyacentes, la fachada conuste en una serie de capas de vidno mate, vidno transparente, pantallas de issamento térmico o solar en combinaciones vanas. Por tanto la CAPA exterior sempre permanece igual, mientras que las capas internas vallan de acuerdo con sus funciones específicas (habitaciones de hotel. apartamentos, la escalera en cascada, los baños, etc.), creando una apanenca de diversas profuncidades.

#### Massimo & Gabriella Carmassi Edificio per 48 appartamenti in Pontedera

Pisa, Italy

Photographs: Mario Ciampi

The urban plan designed by the city council of Pontedera included the construction of a curved building with five foors that would act as the eastern boundary of the main road out of the city towards the country, which is crossed in the middle by a pedestrian path.

The architects designed a red brick building whose surface is characterised by a very clear mythin of openings and pillars whose shadows produce very interesting effects. The west facade, that rises in front of a large park with lawns, has large sheltered ferraces that enrich the life of the apartments. The east facade, where the bathrooms and the bedrooms are concentrated, gives onto the country.

As in other works by these srchtacts, the simplicity of the plan, the homogeneity of the materials and the dimensions of the windows give the building an easily identifiable monumental personality in an anonymous and, until recently, not too stimulating peripheral environment.

Athough small, the two- or three-bedroom apartments have double views of the enterior (the corner flats have triple views) and a tertace on each facade. The ternaces protected by pillars help to define a powerful but simple external image and create a private reserved space which most rooms of the apartment give onto with protection from the rain and sunlight. It is a very ingenious solution from both the psychological and the climatic viewpoint. The structure of the building is composed of a skeleton of prelabricated concrete elements. The external walls are in exposed bridwork. Special attention was paid to the elimination of the thermal bridges and acoustic inputation.

El plan urbanistico diseñado por el ayuntamiento de Portedera prevela la construcción de un edificio curvo de cinco plantas que haría las
veces de limite este del eje principal que parte de la ciudad hacia el
campo, y que está atravesado en su mitad por una vía peatonal.
Los arquitectos han diseñado un edificio de ladrillo rojo cuya superficie
se caracteriza por un nitmo muy marcado de aberturas y pilares cuya
sombra produce efectos muy sugestivos. La fachada ceste, que se alza
ante un gran parque con césped, cuenta con grandes terrazas protegidas que enriquecen la vida de los apartamientos. La fachada este,
donde se concentran los baños y los dormitorios, se abre al campo.
Como en otras actuaciones de los arquitectos, la senciliez del plan, la
homogeneidad de los materiales utilizados y las dimensiones de los
vanos otorgan al edificio una personalidad fácilmente identificable, por
su carácter monumental, en un entorno periférico anónimo y, hasta
hace poco, no demasiado estimulante.

Aunque de dimensiones modestas, los apartamentos, de dos o tres dormitorios, disfrutan de doble vista al exterior (los que hacen esquina, triple) y de una terraza en cada fachada.

Las terrazas protegidas por pilares, además de contribuir a la definición de una imagen extenor poderosa y, a la vez, simple, crean un espacio privado y reservado al que se abren gran parte de los ambientes del apartamento. Se trata de una solución muy ingeniosa desde un punto de vista tanto psicológico como microclimático, ya que estas terrazas protegen de la lluvia y de un excesivo nivel de insolación.

La estructura del edifico está compuesta de un esqueleto de elementos prelabricados de hormigón. Los muros extenores están realizados con ladrillo visto.

Se ha prestado una especial atención a la eliminación de los puentes térmicos y al aislamiento acústico.

## Brouwersgracht 280-282 L.A. Rieshuis

Amsterdam, The Netherlands

Photographs: Christian Richters

The challenge of the design of L.A. Reshuls residential units was to fit in a small acceed housing project in the historical urban fabric. The project in the Vinkenstraet is build for a special target group. The seven independent units have a continuous space on the ground floor. Together with the L.A. Restus it forms a commune for elderly homosespals. The seniors live independent, but for special care they can use the facilities of the adjoining nursing home "De Retvinot"

The project consets of four layers with two different one-bedroom apartments on each layer. The apartments can be reached via a central starcase and an elevator. The floor plans are clear and compact every floor has a shared ballows. The communal space on the ground level is designed by the artist Marcel Kronerburg. It has a sculptural form and is related to the garden of "De Rienvinck". The facade consists of a brick wall with staggered windows. This creates a different incidence of light in every apartment. Because of the glass facade, the communal space can be seen from the street. The belcomes are directed towards the sun and the inner garden of "De Rietwick". The use of materials as wood and glass and the fragile steel balloonies give the garden facade an informal character.

The challenge of the design of this seven owner-occupied apartments and one studio is how to insert a new building into a historical urban context of fine 17th and 18th century brick townhouses along one of the old canals in Amsterdam. Three types of apartments, all with an open floor plan, are incorporated in the scheme: a wide unit, a narrow unit and a penthouse. Kitchens and bathrooms are compact and placed to create as much free space as possible. Only in entrance halls can be closed by sliding doors. The openness of the plan maximises user flexibility: the bedroom, for example, can alternatively be used as a dining room. The apartments on the first, second and third floors —each with a small private baccony at the rear of the building— are intended to be occupied by one person. The penthouse on the fourth foor is a facuperson unit with a roof garden overlooking the city.

The street facade of the living rooms is designed as a frame infilled entirely with glass. The glazing is somened by eitheric shutters which open to create Franch baconies overlooking the caral. In contrast, at the corner of the site. the living rooms of the apartments are articulated as a brick tower with large punched openings. Windows on the alley and the rear elevation are smaller and more discreet, providing daylight and views but also giving the inhabitants a measure of privacy.

Bireto de este projecto consista en integrar un projecto residencial de escala reducida en un tejido urbano histórico. Los destinatarios del compleio de Vicentrial forman un grupo muy definido. Las sette unidades de habitación independentes comparten un espacio común en la planta baja, y sunto con el L.A. Rieshus conforma una comuna para ancianos homosexuales: Éstos viven de modo independente, pero para sua cuidados utilican los seswoos de la veora residenca de ancianos "De Renyinck".

El programa se desarrolla en custro plantas, cada una de las cuales alois dosapartamentos de dos habitaciones. Se puede acceder a los apartamentos mediante la escalera central o un ascersion Las plantas son claras y compactas y todas cuentan con un balcón común. El espacio común en la planta bala es un diseño del artista Marcel Kronenburg, Su forma es escultural, y evoca el sardin de la residencia de ancianos. La fachada se ha realizado con ladrillo rojo, y sus ventanas dispuestas de modo imegular favorecen que la luz inoda en cada apartamento de un modo distinto, mientras que fachada. de vidro del espacio común permite una máxima comunicación con el extenor Los ventanales panoramicos están orientados al sol y al jardin intenor de la residencia "De Rietvinck". El uso de materiales como madera o vidno y la fragilidad de los ventanales de acero otorgan a la fachada que se abre al jardin un caracter informal.

El diseño de los siete apartamentos y el estudio que conforman el proyecto. de Brouwengracht, en Amsterdam, planteiba un desafio similar al del projecto antenor integrar un nuevo edificio en un contexto urbano histórico. como pueden ser edificaciones de los siglos XVII y XVIII a lo largo de uno de los canales de Amsterdam.

El proyecto induye tres tipos de apartamentos, todos de planta diáfana una unidad de habitación ancha, una estrecha y un atico. Las cocinas y los baños son compactos y su disposición permite disponer de la múxima superficie libre. El único espaco que se puede cerrar mediante puertas correderas es el vestibulo de entrada. Al tratarse de plantas diáfanas, se ha conseguido otorgar a las viviendas una gran flexibilidad de uso; el dormitorio, por ejempio se puede también utilizar como comedor. Los apartamentos de la primera segunda y tercera plantas - cada uno con su pequeño balcon privado en la parte trasera del edificio -- están concebidos para alojar a un sólo ocuparte. El litico de la cuarta planta es una unidad de habitación para dos persorus, con una acotea ajardinada que domina sobre la cudad. La fachada de los dormitonos se ha diseñado como una estructura revestida. de vidrio. Esta cristalera está protegida por contraventanas extenores que se abren creando ventanales panorámicos sobre el canal. Por su parte, los salones de los apartamentos se han articulado como tomes realizadas en ladrillos con grandes vanos. Las ventanas que se abren al callejón y a la parte posterior del edificio son más pequeñas y discretas permitiendo que los inquinos disfruten de las vistas y de luz natural un pender su intimidad.
